

## TOPIC:

Zoho Books Modifications  
along with API Change

### PROBLEM

The Client's Zoho Solution in use required an API change due to API requirements update from Zoho. Not adhering to the change would result in the Client's Zoho Solution to not work beyond the API change deadline. All APIs that were triggering any automations with Zohobooks needed to be changed.

### SOLUTION

The client is at a state now where all their automations adhere to the API changes from Zoho. As a consequence, the client would not experience any lags or issues from that aspect, at using Zohobooks!

### TRANSFORMATION

All APIs in place and their configuration had to be taken into account and their functional routing, adaptation and testing had to be catered to as part of this change. An update at their existing APIs was done and all aspects had to be coordinated with the client's team for a smooth transition, where it was needed.

### INDUSTRY:

The client operates within the logistics industry with nationwide operations.

### ERPHUB'S IMPACT:

The transformation allowed the client to continue to operate without any road-blocks tied to operational lag from an entire system coming to halt for a complete API update solution.
